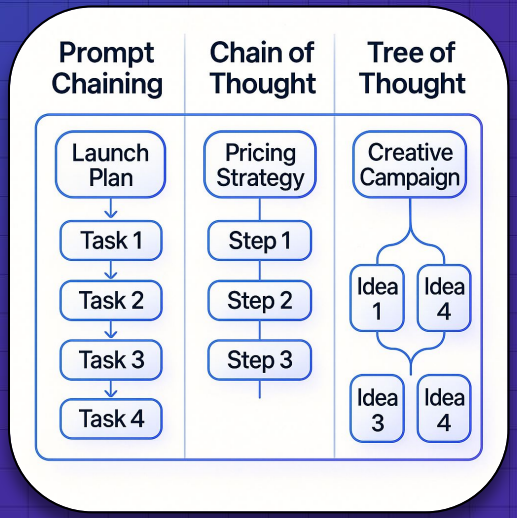
Choosing a Framework

- Start with a task that matters to you—like building a pitch, planning content, or making a tough decision

- Then match it with a framework that fits
  - Prompt Chaining works best when you're building something in steps
  - Chain of Thought is perfect for logical decisions
  - Tree of Thought Reasoning helps when you want to explore creative directions



More Frameworks to Choose From

- Not sure what the AI needs from you? Use Ask Before Answering
- Want to refine a rough draft? Go with Self-Critique Prompting
- Need help comparing options? A Decision Matrix gives you a clear side-by-side view
- Pick the one that feels right—you don’t need to use them all at once

Prompt Chaining Example

- Prompt Chaining is perfect when you want the AI to help you complete a multi-step task

- For example, you can follow this sequence:
  1. ***"Summarize the top three benefits of the product."***
  2. ***"Write three email subject lines that highlight those benefits."***
  3. ***"Draft a full announcement email based on those subject lines."***

Decision Matrix Example

- When you're comparing options—like job offers, project bids, or product strategies—it helps to lay everything out side by side

- With a Decision Matrix, ChatGPT can evaluate your choices based on the criteria you care about most

- For example:
  "Create a decision matrix comparing these three projects based on pay, timeline, client quality, and long-term potential."

Tree of Thought Example

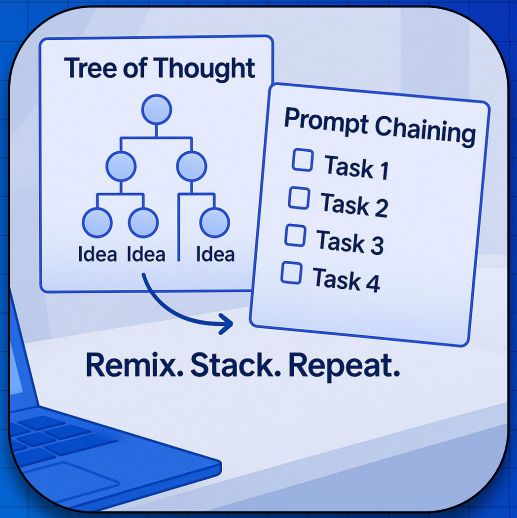
- Tree of Thought is perfect when you want the AI to explore multiple strategies before picking the best one

- You get creativity first, clarity second

- For example:
  "Brainstorm three to five creative campaign ideas for launching a new AI productivity tool. Using Tree of Thought reasoning, explore different marketing approaches. Then, evaluate each idea based on reach, cost, and fit for a startup budget, and recommend the best one."

Remix & Reflect

- Just because you started with one framework doesn't mean you have to stick with it
- Try remixing your task with a different framework—or stack them for extra power
- For example, brainstorm with Tree of Thought, then build out your best idea using Prompt Chaining
- Frameworks aren't one-size-fits-all—they're flexible tools you can combine in creative ways



Build Your Prompt Library

- When a prompt works really well, save it
- Start building your own library of high-performing prompts you can reuse, remix, or hand off to your team
- Having these ready means you’re never starting from scratch
- It’s like building your own creative toolkit—and every great tool saves you time
