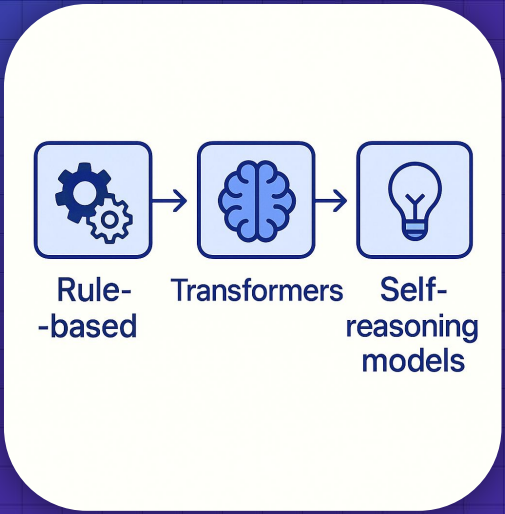
Timeline Towards Reasoning AI

1. **Before 2017:** AI handled text word-by-word, lost context

2. **2017:** Transformers enabled full-sentence understanding

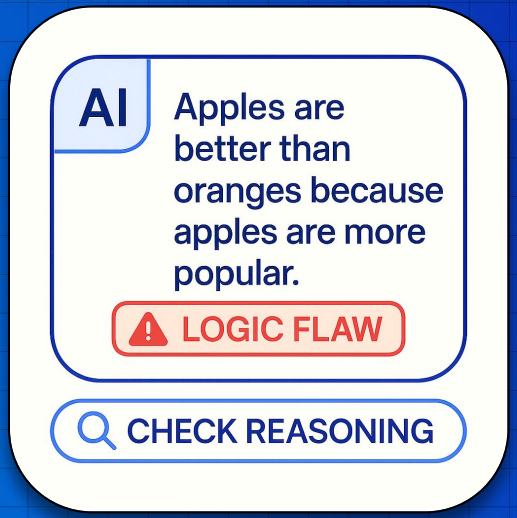
3. **2020–2023:** Prompting frameworks like “Let’s think step by step” improved logic

4. **2024+:** Models like Claude, Gemini, o-series, and DeepSeek reason on their own



Today’s Top AI Models

1. **o-series (OpenAI):** Structured logic + tool use
2. **Claude Opus & Sonnet:** Deep reasoning or high-throughput
3. **Gemini 2.5:** Multimodal with long context (1M tokens)
4. **DeepSeek R1:** Fast, structured, built for research + code

Smarter Logic, Fewer Mistakes


- **They hallucinate less**
  - Slower, more deliberate logic reduces made-up content
- **But they still follow flawed prompts**
  - Missing info or bias can mislead their reasoning
- **Critical thinking still matters**
  - Always ask: Does this logic hold up? What's missing?
